

Parking lot USB exercise

Contents	• Types of information: The USB drive contains both personal files, like family and pet photos, and work-related files (such as a new hire letter) and an employee shift schedule. • PII: While there are no files that directly contain PII, the new hire letter and shift schedule could include sensitive employee information. • Safety of storing files: It's not safe to store personal and work files together on the same drive because it increases the risk of accidentally exposing or sharing sensitive work data.
Attacker mindset	An attacker could use the photos and work files to build believable social-engineering or spear-phishing campaigns aimed at Jorge or hospital staff. They could impersonate Jorge or trusted colleagues to request access, reset passwords, or trick staff into revealing credentials. • This could be used against other employees because messages or docs could expose coworkers' names, roles, or schedules and be reused to target them with tailored phishing or impersonation. • This could possibly be used against relatives because personal photos and family details make relatives targets for doxing or targeted scams. • This could provide access to the business because work files like hire letters or schedules can be leveraged to impersonate staff, bypass social checks, or craft attacks that lead to unauthorized system access.
Risk analysis	• <i>USB devices can hide malware like keyloggers, worms, or ransomware. If another employee connected an infected drive, it could spread across hospital systems, stealing data or shutting down operations.</i> • <i>A threat actor could find documents with employee names, work schedules, or internal files that hint at the hospital's structure and processes.</i> • <i>This data could be used for impersonation, phishing, or targeted attacks against employees or the hospital itself. Technical controls like USB scanning, operational controls like employee training, and managerial controls such as strict USB policies can help prevent these risks.</i>
